

DAB PUMPS · MANUFACTURING · WATER TECHNOLOGIES

Demand that starts **in the home**

DAB Pumps has always sold through the trade: wholesalers, installers and specifiers decide which pump goes into a home. With EsyBox Pop, a booster for low water pressure at home, DAB speaks to the homeowner directly. We designed and built **the direct-to-consumer demand generation system for EsyBox Pop**: it reaches the homeowners who have a pressure problem, shows them the product in their own terms and **turns their interest into a request** that reaches an installer, a wholesaler or DAB, in more than six markets around the world, from the Netherlands to Australia and South Africa. **The trade receives demand it did not have to create**, and DAB gains what a B2B brand rarely has: **a direct relationship with the people who use its products**, and what it learns from them.

THE COMPANY

A world leader in water technologies, sold through the trade.

THE GOAL

Create demand from the end user, in markets led by the distribution chain.

THE SYSTEM WE BUILT

Direct-to-consumer demand generation for EsyBox Pop: homeowners reached, their requests passed to installers and wholesalers, a direct relationship between DAB and its end users.

Direct to consumer · End-user demand generation · Problem-led messaging · Lead capture · Installer and wholesaler routing · Installer programme (DCLUB) · End-user relationship · More than six markets
